SUMMARY

Backend Software Engineer with 4 years of experience building Java and Spring Boot microservices and REST APIs for BFSI/Capital Markets systems at Tata Consultancy Services, engaged on Citi Bank and Wells Fargo accounts. Strong in Oracle SQL performance tuning, event-driven design with Kafka, and SWIFT/ISO messaging compliance. Solid grounding in data structures, algorithms, and OOP/design patterns, reinforced through 120+ solved DSA problems and an actively developed personal project — a full-stack AI job-matching platform built on Java 21, Spring Boot 3.5, PostgreSQL, MongoDB, and LLM integration. Looking to bring production backend engineering rigor to a Java SDE/Backend role in fintech.

TECHNICAL SKILLS

Languages: Java, SQL, Python, C/C++, XSLT, XSD Schema

Backend & APIs: Spring Boot, Spring Data JPA, Spring Security, REST APIs, Microservices

Messaging & Caching: Apache Kafka, Caffeine (in-memory cache)

Databases: Oracle SQL (performance tuning, indexing, execution plans), PostgreSQL, MongoDB

DevOps & Tools: Docker, Jenkins, Git, Maven, Flyway (schema migrations), Unix Shell, Jira

Testing: JUnit, NRT (non-regression testing)

Concepts: Data Structures & Algorithms, OOP, Design Patterns (Factory, Strategy, Repository), System Design, Multithreading fundamentals

Domain: BFSI, Capital Markets, SWIFT MT56x / ISO messaging

EXPERIENCE

Tata Consultancy Services — Software Engineer, Capital Markets

Aug 2022 – Present

Client engagements: Citi Bank (Mar 2024 – Present) • Wells Fargo (Aug 2022 – Mar 2024)

Citi Bank — Backend Software Engineer

- Designed and built a reconciliation engine in Java/Spring Boot to classify corporate action trades as reconciled or unreconciled, reducing manual operational review by 4 hours/day.
- Developed 8+ Spring Boot REST APIs for trade status and reporting, integrated with internal operational dashboards.
- Improved trade lookup performance by 30–40% through Oracle SQL query optimization, composite indexing, and execution-plan tuning.
- Achieved 90%+ unit test coverage (JUnit/NRT), reducing production defects and enabling stable CI/CD releases.
- Led root-cause analysis for critical production incidents in high-impact financial systems, delivering fixes within SLA.
- Built a reusable file-validation and SWIFT/CPE message-formatting utility framework used across the reconciliation workflow.

Wells Fargo — Associate Backend Software Engineer

- Built an end-to-end automation pipeline for SWIFT MT564/566/567/568 corporate action messages, cutting manual processing effort by 60%.
- Developed an Excel bulk-upload system handling 10k+ records with validation and audit logging, reducing onboarding errors by 35%.
- Owned corporate action notification workflows, ensuring 100% SWIFT/ISO compliance.
- Resolved 20+ SIT/UAT defects, improving delivery efficiency and reducing defect cycle time.

PROJECTS

Job Agent — AI-Powered Job Discovery & Resume-Matching Platform

Ongoing personal project

- Architected a full-stack backend in Java 21 and Spring Boot 3.5 using a modular, layered design (controller → service → repository) split across independent User, Resume, Company, Job, and AI modules.
- Built a dual-persistence data layer: PostgreSQL with Spring Data JPA and Flyway-managed schema migrations for relational data, and MongoDB for storing AI-extracted resume analysis documents.
- Integrated Google Gemini via the GenAI SDK behind a custom execution engine that discovers available models at runtime, caches the last working model (Caffeine), and automatically falls back on failure — decoupling the app from any single model version.

- Built an automated company-onboarding and job-discovery pipeline: Jsoup-based scraping behind a factory-pattern fallback downloader, AI-driven extraction of structured company/job data from raw career-page HTML, and resume parsing via Apache PDFBox and POI.
- Iterated the schema and architecture across 34 commits and two build phases, using Flyway-versioned migrations to evolve the data model as requirements changed; a React + Vite + TypeScript frontend is in active development.

Backend Microservices & DSA Practice

- Built Spring Boot microservices with JWT authentication and Spring Security, using a Kafka-based event-driven design.
- Solved 120+ data structures & algorithms problems on LeetCode spanning LinkedList, Stack, Tree, Graph, and Dynamic Programming.

EDUCATION

Jaypee University of Engineering and Technology

June 2022

B.Tech, Computer Science and Engineering

Kendriya Vidyalaya IIT Kanpur

June 2017

12th (Senior Secondary Examination)

CERTIFICATES

- Data Structures & Algorithms, Java, Spring Boot, SQL — TCS Internal Certification
